AI-NATIVE WORKFLOW & COMPLIANCE AUTOMATION

Intelligent systems for regulated, mission-critical teams

Agnis Labs builds cloud-native platforms that automate workflows, compliance, and decision-making for healthcare, finance, and other high-stakes environments — where reliability, auditability, and security are non-negotiable.

SOLUTIONS

PLATFORM

Intelligent Workflow Automation

Orchestrate work across tools, teams, and environments. Reduce manual handoffs, eliminate bottlenecks, and give technical teams real-time visibility into operations.

Ideal for engineering, DevOps & operations teams.

COMPLIANCE

Compliance Automation

Operationalize SOC 2, HIPAA, and internal controls with automated checks, evidence collection, and reporting embedded in day-to-day workflows.

For teams preparing for audits or maintaining continuous compliance.

CUSTOM

Custom Platforms & Integrations

Build tailored systems around your existing tools, data, and cloud. Create a cohesive backbone for engineering, operations, and compliance workflows.

From targeted integrations to full greenfield platforms.

ANALYTICS

Analytics & AI-Driven Insights

Detect anomalies, surface risks, and optimize performance. Move from reactive reporting to proactive, data-backed decisions using multimodal AI.

For leaders needing trustworthy, near-real-time operational signals.

ADVISORY

Architecture & Implementation Advisory

Design, validate, and implement scalable, secure architectures aligned to regulatory and business requirements, led by hands-on engineering leadership.

Deep cloud & distributed systems experience.

ENABLEMENT

Enablement & Ongoing Support

Training, documentation, and collaborative iteration to ensure your teams can operate and extend the platform confidently over the long term.

Focused on long-term ownership by your internal teams.

ABOUT

Agnis Labs is an intelligent systems company founded in 2025, based in Hoffman Estates, Illinois. We design AI-native, cloud-based platforms that automate workflows and compliance for regulated industries.

We help technical and compliance teams replace fragmented tools and manual processes with cohesive, automated systems — enabling organizations to move faster while staying audit-ready.

Leveraging deep expertise in cloud-native architectures and distributed systems, we design for scalability, resilience, and security from day one.

WHO WE SERVE

- Healthcare Providers & Payers
- Healthcare SaaS & Digital Health
- Financial Services
- FinTech
- Security-Driven Enterprise
- Compliance-Driven Enterprise
- Insurance

TECHNOLOGY STACK

- AWS Bedrock
- Azure OpenAI
- LangGraph
- Semantic Kernel
- AutoGen
- MCP Architecture
- Databricks
- Kubernetes
- Python / FastAPI

BCI & NEURAL INTERFACES

ADVANCED PROPULSION

RESEARCH & FUTURE

Human–Machine Interfaces & Bio-Systems

- Cellular biology-inspired models & computational approaches
- Neural signal processing and brain–computer interfaces (BCI)
- Bio-inspired control systems for adaptive, resilient software

Next-Gen Propulsion & Physical Systems

- Conceptual research into vehicles operating against gravity
- Rocket & advanced propulsion architectures & control systems
- Long-term exploration of energy systems for future vehicles

Microservices · Event Streaming · Vector Databases · Multimodal Embeddings · Medallion Lakehouse

OPERATIONAL GRAPH — CORE MODULES

→ Workflows — Automated task orchestration across teams & systems

→ Compliance — Continuous SOC 2 & HIPAA checks, evidence & alerts

→ Signals — AI-driven anomaly detection and risk insights

→ Analytics — End-to-end visibility into operations and controls

→ Integrations — Connects with existing tools, data, and identity

→ Playbooks — Reusable patterns for audits, incidents & onboarding

OUR APPROACH

01

Discover & Align

Deep-dive into your workflows, data flows, and compliance posture. We map gaps to outcomes before writing a single line of code.

02

Design & Architect

Cloud-native blueprints aligned to your infrastructure. Every decision documented, reviewable, and built for long-term maintainability.

03

Build & Automate

Iterative delivery with production-grade quality gates — AI agents, compliance controls, and integrations shipped with observability built in.

04

Enable & Evolve

Knowledge transfer, runbooks, and ongoing advisory ensure your team owns and scales the platform. Partners, not vendors.
